Contents

Preface ................................................................. vii

Part I: Fundamentals

Chapter 1  Energy in Thermal Physics ............................ 1
  1.1 Thermal Equilibrium ........................................... 1
  1.2 The Ideal Gas .................................................. 6
      Microscopic Model of an Ideal Gas
  1.3 Equipartition of Energy ........................................ 14
  1.4 Heat and Work ................................................ 17
  1.5 Compression Work ............................................. 20
      Compression of an Ideal Gas
  1.6 Heat Capacities ............................................... 28
      Latent Heat; Enthalpy
  1.7 Rates of Processes ........................................... 37
      Heat Conduction; Conductivity of an Ideal Gas;
      Viscosity; Diffusion

Chapter 2  The Second Law ......................................... 49
  2.1 Two-State Systems ............................................ 49
      The Two-State Paramagnet
  2.2 The Einstein Model of a Solid ............................... 53
  2.3 Interacting Systems .......................................... 56
  2.4 Large Systems ................................................ 60
      Very Large Numbers; Stirling’s Approximation;
      Multiplicity of a Large Einstein Solid;
      Sharpness of the Multiplicity Function
  2.5 The Ideal Gas ................................................ 68
      Multiplicity of a Monatomic Ideal Gas;
      Interacting Ideal Gases
  2.6 Entropy ..................................................... 74
      Entropy of an Ideal Gas; Entropy of Mixing;
      Reversible and Irreversible Processes

Part III: Statistical Mechanics

Chapter 6 Boltzmann Statistics .................................. 220
6.1 The Boltzmann Factor ............................................. 220
\textit{The Partition Function; Thermal Excitation of Atoms}
6.2 Average Values ..................................................... 229
\textit{Paramagnetism; Rotation of Diatomic Molecules}
6.3 The Equipartition Theorem ....................................... 238
6.4 The Maxwell Speed Distribution ................................. 242
6.5 Partition Functions and Free Energy ............................ 247
6.6 Partition Functions for Composite Systems .................... 249
6.7 Ideal Gas Revisited .................................................. 251
\textit{The Partition Function; Predictions}

Chapter 7 Quantum Statistics ...................................... 257
7.1 The Gibbs Factor ..................................................... 257
\textit{An Example: Carbon Monoxide Poisoning}
7.2 Bosons and Fermions .............................................. 262
\textit{The Distribution Functions}
7.3 Degenerate Fermi Gases .......................................... 271
\textit{Zero Temperature; Small Nonzero Temperatures; The Density of States; The Sommerfeld Expansion}
7.4 Blackbody Radiation ............................................... 288
\textit{The Ultraviolet Catastrophe; The Planck Distribution; Photons; Summing over Modes; The Planck Spectrum; Total Energy; Entropy of a Photon Gas; The Cosmic Background Radiation; Photons Escaping through a Hole; Radiation from Other Objects; The Sun and the Earth}
7.5 Debye Theory of Solids ........................................... 307
7.6 Bose-Einstein Condensation ...................................... 315
\textit{Real-World Examples; Why Does it Happen?}

Chapter 8 Systems of Interacting Particles ....................... 327
8.1 Weakly Interacting Gases ........................................ 328
\textit{The Partition Function; The Cluster Expansion; The Second Virial Coefficient}
8.2 The Ising Model of a Ferromagnet .............................. 339
\textit{Exact Solution in One Dimension; The Mean Field Approximation; Monte Carlo Simulation}
# Contents

* * *

## Appendix A  Elements of Quantum Mechanics  .................. 357

A.1 Evidence for Wave-Particle Duality  ...................... 357
   * The Photoelectric Effect; Electron Diffraction*
A.2 Wavefunctions  ...................................... 362
   * The Uncertainty Principle; Linearly Independent Wavefunctions*
A.3 Definite-Energy Wavefunctions  ......................... 367
   * The Particle in a Box; The Harmonic Oscillator; The Hydrogen Atom*
A.4 Angular Momentum  .................................... 374
   * Rotating Molecules; Spin*
A.5 Systems of Many Particles  ............................. 379
A.6 Quantum Field Theory  ................................ 380

## Appendix B  Mathematical Results  .......................... 384

B.1 Gaussian Integrals  .................................... 384
B.2 The Gamma Function  ................................... 387
B.3 Stirling’s Approximation  ............................... 389
B.4 Area of a $d$-Dimensional Hypersphere  .................. 391
B.5 Integrals of Quantum Statistics  ......................... 393

Suggested Reading  ........................................... 397

Reference Data  ............................................. 402

Index  ...................................................... 406
